

## COURSE OUTLINE

### (1) GENERAL

<b>SCHOOL</b>	Economic Sciences		
<b>ACADEMIC UNIT</b>	Department Accounting and Finance		
<b>LEVEL OF STUDIES</b>	Undergraduate		
<b>COURSE CODE</b>	AF505	<b>SEMESTER</b>	Fifth
<b>COURSE TITLE</b>	Econometrics I		
<b>INDEPENDENT TEACHING ACTIVITIES</b> <i>if credits are awarded for separate components of the course, e.g. lectures, laboratory exercises, etc. If the credits are awarded for the whole of the course, give the weekly teaching hours and the total credits</i>		<b>WEEKLY TEACHING HOURS</b>	<b>CREDITS</b>
Lectures and laboratory exercises		3	5
<i>Add rows if necessary. The organisation of teaching and the teaching methods used are described in detail at (d).</i>			
<b>COURSE TYPE</b> <i>general background, special background, specialised general knowledge, skills development</i>	Scientific field		
<b>PREREQUISITE COURSES:</b>	Mathematics and Statistics		
<b>LANGUAGE OF INSTRUCTION and EXAMINATIONS:</b>	Greek		
<b>IS THE COURSE OFFERED TO ERASMUS STUDENTS</b>	Yes		
<b>COURSE WEBSITE (URL)</b>	<a href="https://eclass.uowm.gr/courses/ACCFIN148/">https://eclass.uowm.gr/courses/ACCFIN148/</a>  (Note: students must register in the university's online platform, Eclass)		

### (2) LEARNING OUTCOMES

<p><b>Learning outcomes</b></p> <p><i>The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.</i></p> <p><i>Consult Appendix A</i></p> <ul style="list-style-type: none"> <li>• <i>Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area</i></li> <li>• <i>Descriptors for Levels 6, 7 &amp; 8 of the European Qualifications Framework for Lifelong Learning and Appendix B</i></li> <li>• <i>Guidelines for writing Learning Outcomes</i></li> </ul>
<p>This course aims to provide an empirical content on economic theories using the econometric software EViews.</p> <p>Upon the completion of the course the students will be able to:</p> <ul style="list-style-type: none"> <li>• Understand the methodology of econometric analysis and its usefulness in applied economics.</li> <li>• Understand the concept of regression and its application in economic analysis.</li> <li>• Understand the econometric problems arising in a regression model and propose solutions.</li> <li>• Apply estimation techniques and tests of statistical hypotheses in a problem at hand.</li> </ul>

- Evaluate the regression results and, if possible, provide economic policy recommendations.

### General Competences

*Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim?*

<i>Search for, analysis and synthesis of data and information, with the use of the necessary technology</i>	<i>Project planning and management</i>
<i>Adapting to new situations</i>	<i>Respect for difference and multiculturalism</i>
<i>Decision-making</i>	<i>Respect for the natural environment</i>
<i>Working independently</i>	<i>Showing social, professional and ethical responsibility and sensitivity to gender issues</i>
<i>Team work</i>	<i>Criticism and self-criticism</i>
<i>Working in an international environment</i>	<i>Production of free, creative and inductive thinking</i>
<i>Working in an interdisciplinary environment</i>	<i>.....</i>
<i>Production of new research ideas</i>	<i>Others...</i>
	<i>.....</i>

### Autonomous work

Production of new research ideas

Decision-making

Team work

Promotion of free, creative and inductive thinking

### (3) SYLLABUS

1 Objective of Econometrics 1.1 The meaning of Econometrics 1.2 Aim of Econometrics 1.3 Econometric Analysis 1.4 How to solve an econometric model step by step 1.5 Categories of statistical data 1.6 Data sources 1.7 Data presentation

2. Simple Regression 2.1 Introduction 2.2 Determinative and stochastic relationships 2.3 Regression line of population 2.4 Ordinary Least Squares Method 2.5 Properties of Regression Line 2.6 Assumptions of simple linear regression model 2.7 Gauss-Markov Theorem 2.8 Regression without a constant 2.9 Statistical inference 2.10 Confidence interval of  $\beta_0$  and  $\beta_1$  parameter 2.11 Testing hypothesis of  $\beta_0$  and  $\beta_1$  parameter 2.12 F distribution testing. Analysis of variance 2.13 Coefficient of determination  $R^2$  2.14 Correlation coefficient 2.15 Forecasting simple regression model 2.16 Confidence interval for expected value  $E(Y)$  2.17 Confidence interval for forecasting 2.18 Regression coefficient and elasticity 2.19 Exercises using EViews

3. Multiple Regression 3.1 Introduction 3.2 The linear regression model with three variables 3.3 Three variable model with matrices 3.4 k variable model with matrices 3.5 Basic assumptions of multiple linear model 3.6 Least squares method 3.7 Properties of  $\beta$  estimator 3.8 Gauss-Markov theorem 3.9 Confidence interval of multiple regression parameters 3.10 Testing statistical significance of

multiple linear regression model 3.11 Analysis of variance in multiple linear regression model 3.12 Coefficient of determination multiple  $R^2$  3.13 Relationship between F statistic and multiple  $R^2$  3.14 Partial correlation coefficients 3.15 Choosing between regression models 3.16 Testing linear relationships between regression coefficient 3.17 Exercises using EViews

4. Hypotheses violation of a model: Diagnostic Tests of Residuals 4.1 Normality 4.2 Autocorrelation 4.3 Heteroscedasticity

#### (4) TEACHING and LEARNING METHODS - EVALUATION

<p style="text-align: center;"><b>DELIVERY</b></p> <p style="text-align: center;"><i>Face-to-face, Distance learning, etc.</i></p>	Face to face	
<p style="text-align: center;"><b>USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY</b></p> <p style="text-align: center;"><i>Use of ICT in teaching, laboratory education, communication with students</i></p>	Support the learning process using the Eclass online platform Laboratory education using econometric software EViews	
<p style="text-align: center;"><b>TEACHING METHODS</b></p> <p><i>The manner and methods of teaching are described in detail.</i></p> <p><i>Lectures, seminars, laboratory practice, fieldwork, study and analysis of bibliography, tutorials, placements, clinical practice, art workshop, interactive teaching, educational visits, project, essay writing, artistic creativity, etc.</i></p> <p><i>The student's study hours for each learning activity are given as well as the hours of non-directed study according to the principles of the ECTS</i></p>	<b>Activity</b>	<b>Semester workload</b>
	Lectures and Laboratory practice	39 hours
	Individual and semi guided study	111 hours
<b>Course total</b>	<b>150 hours</b>	
<p style="text-align: center;"><b>STUDENT PERFORMANCE EVALUATION</b></p> <p><i>Description of the evaluation procedure</i></p> <p><i>Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open-ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other</i></p> <p><i>Specifically-defined evaluation criteria are given, and if and where they are accessible to students.</i></p>	<p>Mid term Exam 30%</p> <p>Final Exams (short answer questions, multiple choice questions, problem solving) 70%</p>
